

SpillSmart K-Sorb is an oleophilic (absorbs oil-based liquids) hydrophobic (resists water) cellulose absorbent. It is a great organic alternative to polypropylene absorbents for absorbing hydrocarbons, oils and greases on land and on water. The hydrophobic fibre stabilises oil-based sludge separating free oils from water and can be used to remove contaminants in ponds, creeks, lagoons and marinas. On land, K-Sorb Hydrophobics high capillary wicking action instantly draws in hydrocarbons encapsulating them into its hollow fibres allowing for a fast clean-up before the spill spreads. It is for this reason, being biodegradable and its ability to not leach liquids back into the environment that disposal to land fill may be possible subject to local regulations and guidelines.

SpillSmart K-Sorb is available in 10L decompressed bags ready for deployment, 13.6kg Compressed bales sold by the bale or 24 bales per pallet. Contact your local EnviroSmart Distributor for further information about this quality absorbent and others in our range.

Designed for:

- Indoor / Outdoor land based applications and spills close to or on water
- The cleaning up and removal of oil and oil based fluids
- Marinas
- Automotive industry
- Manufacturing industries
- Warehouses
- Workshops

Features:

- Compatible with oil and hydrocarbons
- Rapidly encapsulates liquids preventing them leaching back into the environment
- Absorbs 13 times it's weight in oil
- Lightweight with low dust content
- Fast wicking action
- Biodegradable
