

SpillSmart Drive Over Floor Bunding is designed for applications where non-aggressive liquids are being stored and where lower volume forklift or truck access is required. It's constructed with HF welded Heavy Duty 900gsm PVC, encasing high quality 100% memory foam. This combination provides durability and ease of access. The memory foam instantly returns to shape once clear of the vehicle's wheels.

The bund is secured to the floor with an adhesive. For heavy duty applications, flat bar can be fixed each side of the bund and dynabolted into the concrete. SpillSmart Drive over Floor Bunding is 70mm high and supplied in 5 meter or custom made lengths. Corner pieces can be added to meet specific site requirements. Please contact your Envirosmart distributor for further information.

Designed for:

- Applications where storage of nonhazardous liquids is required
- Forklifts and other vehicles to access the banded area
- Workshops and forecourt areas

Features:

- 900gsm, HD, fabric covering
