

Washing down bitumen and asphalt plant equipment is no easy task. With bitumen being a thick viscous fluid, it is very difficult to clean or remove once its cooled down on machinery surfaces. To try and wash set bitumen with just high pressure water or utilising standard cleaning agents is just about impossible. And the challenge is, if equipment is not maintained and cleaned, major overhauling maybe required.

Envirowash Bitumen Cleaner provides an effective solution for safely cleaning down road paving equipment and other machinery effected by bitumen residue. It is an organic solvent that works by penetrating deep into the surface that lifts and releases bitumen and asphalt. The product requires no mixing and is applied by use of a designated spray system to vehicles or equipment that are heavily soiled in bitumen. Once the bitumen cleaner has soaked in, it can then be rinsed off.

Envirowash Bitumen Cleaner has an added feature. It has been designed keeping waste water separator systems in mind in wash bays, now common on many sites. Where the effectiveness of separation is the primary goal, the formulation will reduce the

load on treatment systems. Basically, the Bitumen Cleaner doesn't blend with water, so as soon as the waste products settle, water goes to the bottom and the Bitumen Cleaner sits on top blended with hydrocarbons removed from the cleaned surface. Seals, O-rings, stators etc will not be damaged and as a bonus Envirowash Bitumen Cleaner is effective for degreasing oil and grease in workshops. Being a dearomatised hydrocarbon this product is classified as a NON Dangerous Good for transport by land sea and air.

Envirowash Bitumen Cleaner is available in easy to store and handle 20L and 200L drums. Please contact our team for further information about this product and others in our range.

Designed for:

- Road and carpark construction and maintenance companies
- Mining maintenance facilities
- Work Shops

Features:

- Effectiveness in removing bitumen and tar with very little residual left on equipment
- Can be used to treat equipment to prevent bitumen sticking for easier removal
- Reduces the load on treatment plant making contaminants easier to separate
- Low toxicity
- Low flammability
- Use of cleaner should not damage seals, rubber, paint and O-rings
- Low content of Hazardous air pollutant
- Effective De-greaser
