

EnviroZyme BILGE

EnviroZyme BILGE can also reduce the accumulation of solid waste and odours in the boat heads, assisting with bioremediation and as a general cleaning product to breakdown oils and grease.

Designed for:

- Cleaning bilge pumps, breaking down oils in bilge water and removing odours
- To control odour and assist in bioremediation of the head waste unit
- Broad range of applications including general cleaning, deodorising and breaking down fats, oil and grease

Features:

- Natural, organic and fully biodegradable ingredients
- Economical – is a concentrated formula
- Safe for humans and the environment
- Does not compete, distort or disrupt natural environments
- Broad spectrum replacement for many harsh chemicals
- Reduces level of organic contaminants
- Can be stored for prolonged periods of time

EnviroZyme BILGE has been designed to digest oil in bilge water whilst removing odours. Manufactured from carefully selected nutrients, enzymes and biodegradable surfactants, this formulation is chemical free making it safe for humans and the environment. This treatment enables enzymes to break down free oils, emulsified oils, hydrocarbons and dissolved organics for indigenous bacteria to digest. The result is the bilge water is cleaned preventing pollutants from being pumped into waterways, the bilge pump is also cleaned and odours are not masked but completely removed.
