

EnviroZyme MM

EnviroZyme MM has been designed as a natural and safe solution for common challenges associated with liquid waste disposal and treatment systems. It's a highly concentrated formula, containing scientifically chosen beneficial and naturally occurring microbes. These microbes are formulated to seed and maintain sufficient fast acting microbes for wastewater treatment and discharge systems. EnviroZyme MM will also boost and maintain 'good' bacteria in septic and sewage water treatment systems. A system that has failed because of poor maintenance or the use of harsh cleaning chemicals may be restarted with this formula and when

combined with EnviroZyme GEN can restore function to treatment plants that may have become congested or septic.

EnviroZyme MM is Australian made and safe for humans, fauna, flora, marine life and sensitive eco-systems. Please contact your local distributor for further information about this product and others in our range.

Designed for:

- Reducing pump outs, odour & ensuring a properly functioning system.
- Minimise infestation
- Maintaining clear drains and plumbing
- Commercial, industrial and domestic applications

Features:

- Fully biodegradable and safe
- Environmentally friendly
- Can be combined with EnviroZyme GEN for a complete & balanced cleaning system
- Economical
- Australian Made
