

SpillSmart Fire Hose Reel Covers are designed to provide great protection for your Fire Hose Reel.

They are Australian Made from heavy duty UV stabilised red PVC and designed to cover the hose reel to assist in keeping the equipment in good working order. Protection from the environment is part of being in compliance with AS 2441-2005. If the Fire Hose Reel is installed in an external situation or in an aggressive environment it must be protected to preserve the integrity of the devices components. Examples include:

- Sun, ultraviolet radiation, wind, rain or salt spray.
- Abnormally dusty or moisture-laden environment.
- Environments having extremes of temperature.

Many Fire Hose Reels are placed in external situations where environmental considerations may not be considered 'extreme' but do require protection from weather elements to provide protection for the equipment and to satisfy this part of the Australian Standard.

Designed for:

- Ensuring properties fitted with Fire Hose Reels are compliant to AS 2441-2005.
- Providing protection from weather elements including Sun, Ultraviolet radiation, Wind, Rain and Salt spray.
- Allowing the hose and reel to operate freely.
- Durable long life protection.

Features:

- Heavy Duty, UV stabilized red PVC cover
- 25mm webbing connection points
- Slot at rear to allow fitting over water outlet
- "Fire Hose Reel" clearly visible on front
- Suitable for most Fire Hose Reels
- Made in Australia to suit local conditions
