

SpillSmart Bilge Socks are designed to be easily lowered into water based liquid, float on the surface and remain buoyant even when full, without leaching the contaminants out. They are easily anchored with the rope attached and are available in two sizes. White in colour, they are easily identifiable for use with oil based fluids and clearly show the saturation level during and after use.

They are perfect for soaking up unwanted oil and oil based fluids including lubricants and fuels in bilges, sumps and tanks leaving only the water behind. They are hydrophobic (resist water) and filled with a highly absorbent polypropylene filter encased with a Heavy Duty shade cloth with anchoring rope.

Please speak to your EnviroSmart Distributor for further information about this product and others in our range.

### Designed for:

Removing oil and oil based products from the surface of:

- Bilges
