

SpillSmart Contaminated Waste Bags ensures the completion of a spill clean-up is handled safely and correctly.

The clearly marked heavy duty polyethylene bag clearly identifies the contents to ensure the waste is not misjudged as general waste.

Fill the bag to approximately $\frac{3}{4}$ to ensure adequate length is available to securely seal the bag with a cable tie. These bags offer great strength and chemical resistance. Always dispose contaminated waste in accordance with government regulations.

Designed for:

- Identifying contaminated waste
- Facilitate correct disposal of waste

Features:

- Clearly marked bag labelling
- Polyethylene construction 150UM
- Bags are strong with excellent chemical resistance
