

IBC Spill Pallets are a great choice providing secondary containment for leaks and spills whilst storing IBC's. However, for IBC's in outdoor storage scenarios, periods of rainy weather can fill the bund sump potentially risking spilled liquid overflowing out of the bund.

SpillSmart IBC Pallet Covers have been designed to prevent rain from reaching the bund sump preventing overflow spills whilst providing the IBC with UV and weather protection. They are manufactured from HD, UV resistant PVC with a variety of options including, size, access points, zipper & Velcro options, eyelets and shock cord to tighten the base of the cover. They are manufactured to suit specific site requirements in our Brisbane factory with quick turnaround times and a high standard of workmanship.

Please contact your EnviroSmart Distributor for further information.

#### Designed for:

- Reducing the potential of spilled liquid overflowing from an IBC Pallet sump.
- Provides rain, UV and weather protection for the IBC

#### Features:

- Manufactured with HD, UV stable PVC
- Made to suit specific site requirements
- Variety of design options including, access points, zipper and Velcro options, eyelets and shock cord to tighten the base of the cover.
