

2 DRUM PALLET COVER AND FRAME
(SPILL PALLETS SOLD SEPARATELY)

4 DRUM PALLET COVER AND FRAME
(SPILL PALLETS SOLD SEPARATELY)

Spill Pallet Bunds are a popular choice for providing secondary containment for leaks and spills whilst storing drums and other containers. However, if they are required to be stored outdoors, cover protection should be acquired.

SpillSmart Pallet Bund Covers, supplied with a frame, provide great weather protection and protection from other debris from entering the sump. Keeping rain water from filling the sump is the prime reason for investing in this product. Bund capacities are generally calculated to hold 110% of the liquid stored. If rain water accumulates in the bund sump and a leak from stored drums eventuated, the risk therefore would be the bund overflowing causing a spill.

SpillSmart Pallet Covers are manufactured from a Heavy Duty, UV treated PVC. They feature industrial grade #10 zippers for easy access, with Velcro tabs to roll up the

access points. Velcro tabs are also featured internally to secure the cover to the frame.

The frame manufactured from galvanised steel is dispatched flat packed with the cover and assembles in minutes. Covers and frames are available for both 2 and 4 Drum Bunds with custom options available.

*Please note: When ordering for a non-EnviroSmart Spill Pallet Bund, please provide the outside corner to corner measurements of the manufactures Spill Pallet Bund(s) requiring the Frame & Cover. Spill Pallet Bunds are sold separately.

Designed for:

- Reducing the potential of spilled liquid overflowing from the Bund sump.
- Provides rain, UV and weather protection

Features:

- Manufactured with HD, UV stable PVC
- Velcro tabs for holding rolled access doors in place
- Internal Velcro tabs secure cover to frame
- Supplied with a Galvanised steel frame to retain the covers shape and rigidity
- Frame assembly takes minutes to complete
- Available in 2 and 4 Drum varieties, IBC and custom options available.
