

SpillSmart Silt Coil is an erosion control and silt management device designed for slopes, stormwater trenches, gully's and highway ditches. Its tubular fabric reduces the rapidity of water whilst capturing sediment, preventing harsh downstream erosion. Anchoring skirts secure the berm in place, whilst a spiral spring retains its cylindrical framework.

SpillSmart Silt Coils are convenient to transport and simple to deploy. Despatched compressed to site, quick release buckles deploy the Silt Coil in seconds. The same buckles also join additional Coils to meet a required length. They can be washed, decompressed, stored and redeployed multiple times.

### Designed for:

- Silt and erosion containment on construction sites
- Stormwater trenches
- Gullys
- Slopes and ditches.

### Features:

- Heavy Duty, UV stable erosion filtration fabric
- Reduces water flow and runoff
- No assembly – A coil spring allows quick deployment and retains the tube shape
- Fast release / connecting buckles
- Anchoring skirt on both upstream and downstream sides of berm
- Convenient and easy to transport. Each Silt Coil despatches and stores compressed.

### Dimensions:

- Deployed Height: 30cm
- Deployed Length: 1.8m

ES-SE-COIL-M	SpillSmart Silt Coil Available in single units or box of 10
