

SpillSmart Silt Fence has been designed to assist with erosion control and the prevention of sediment and soil runoff from earthworks, construction sites and roadworks. Suitable for both civil and domestic projects, a silt fence allows water to freely pass through whilst preventing sediment and other matter from reaching stormwater inlets, waterways or travelling across worksite boundaries.

This cost effective silt control product is a UV protected, durable woven geotextile structure supplied in 86cm x 100m rolls and can be cut to size on site. Please contact your Envirosmart distributor for further information on this product and other silt control products in our range.

Designed for:

- Construction sites
- Roadworks
- Landscape projects
- Civil and domestic projects

Features:

- High tensile capacity to allow 'damming' to its full height
- Allows water to pass through whilst trapping sediment and other solids
- UV inhibitors for long term performance and site protection
- Inert and highly stable woven geotextile structure
- Cost effective and easy to install
