

# COLLAPSIBLE BUND

PRODUCT INFORMATION SHEET

## Overview

SpillSmart Collapsible Bund is a rapid-deploy containment system designed for temporary storage of liquids, chemicals and equipment. Its rigid wall design provides higher capacity containment, while collapsible support legs allow fast access for vehicles and equipment when required.

## Features

- Rigid 300mm side walls
- Folding support legs with lock system
- Freestanding – no assembly required
- Rapid deployment and pack-down
- Vehicle and equipment access when collapsed
- Easy to transport, store and clean

## Description

SpillSmart Collapsible Bund delivers reliable, high-capacity containment for demanding construction, industrial and maintenance environments.

The system features external folding support legs that lock into position, creating rigid 300mm side walls for effective liquid containment. This structure allows the bund to maintain its shape under load, making it ideal for applications requiring higher volume capacity.

When access is required, the support legs can be quickly unlocked and folded down, allowing forklifts, pallet jacks and vehicles to enter the bund area. Once access is complete, the legs are simply returned to their locked position to restore full containment.

Constructed from durable, chemical-resistant materials, the Collapsible Bund is designed to withstand harsh site conditions and repeated use. Eyelets at the base of each support leg allow the unit to be secured to soft ground where additional stability is required.

Available in multiple fabric options to suit a wide range of chemicals and site conditions, the system can also be custom manufactured to meet specific size and application requirements.

## DESIGNED FOR:

- Temporary liquid and chemical storage
- Equipment wash-down areas
- Leak and spill containment
- Worksites requiring internal access
- Construction and industrial environments
- Portable bunding applications

## SPECIFICATIONS:

- 300mm high rigid side wall design
- External folding support legs
- Locking leg system for stability
- Multiple chemical-resistant fabric options
- Heavy-duty UV stabilised materials
- Ground anchoring eyelets
- Custom sizes available
- Australian Made
